

Position Transducers
up to 3000 mm

TLH Series

Special features

- rodless design
- very high operating speed
- ball coupling avoids side loads
- long life > 100 x 10⁶ movements
- outstanding linearity
- high resolution – better than 0.01 mm
- real-time capability
- connector to DIN 43650 (hydraulic connector)
- protection class IP 54

TLH transducers are designed for the direct, accurate measurement of displacement or length in control, regulation and measuring applications. The rodless design allows the actuator to be driven from the side, along the unit length, this allows the total length of the transducer to be shorter and permits stroke lengths up to 4000 mm.

The simplicity of the measuring technique – both passive and absolute – ensures that the transducer is immune to external electrical interference, and that it does not require any built-in power supply to maintain positional information in the event of power failure. Like other potentiometrics, it is a real-time sensor.

A magnetically restrained stainless steel band completely covers the opening through which the actuator operates. The ball coupling is of a new design which prevents forces, generated through parallel or angular offsets, from being transmitted to bearing surfaces. Due to the design and the selected materials the temperature coefficient of the transducer is extremely small. Careful attention to detail and choice of materials has resulted in a transducer with an extremely low temperature drift. The robust design ensures reliable operation even under harsh environmental conditions such as vibration or temperature changes.

The TLH series is designed for clamp mounting. The use of clamps simplifies installation and adjustment.

Description	
Housing	aluminum, anodized
Fixings	adjustable clamps
Sliding parts	aluminum with plastic inserts
Coupling	ball coupling, incorporating a hardened ball, with spring and hardened plate.
Resistance element	conductive plastic
Wiper assembly	precious metal multi-finger wiper, elastomer-damped
Electrical connections	4-pole socket to DIN 43650 (hydraulic connector)

Environmental Data		
Temperature range	-30...+100	°C
Vibration	5...2000 A _{max} = 0.75 a _{max} = 20	Hz mm g
Shock	50 11	g ms
Life	> 100 x 10 ⁶	movem.
Operating speed	10	m/s max.
Operating acceleration	200 (20 g)	m/s ² max.
Protection class	IP 40 (DIN 400 50 / IEC 529) IP 54 (DIN 400 50 / IEC 529) mounted "upside-down"	

Included in delivery
fixing clamps Z 43,
1 plug connector
GDM 3009,
1 seal GDM 3-16

Recommended accessories
Process-controlled indicators
MAP...with display,
Signal conditioner MUW.../MUK
...for standardized output signals

Important

All values given for this series – including linearity, lifetime, micro-linearity, resistance to external disturbances and temperature coefficient in voltage dividing mode – are quoted for the device operating with the wiper voltage driving an operational amplifier working as a voltage follower where virtually no load is applied to the wiper ($I_e \leq 1 \mu A$).

Mounting instructions

It is recommended that the transducer be mounted "upside-down". Only when orientated in this manner, the drop-off-edges which are parallel to the actuator slot work effectively and a build-up of dirt on the sealing band be prevented when the device is used in a dusty environment.
